- •Out-of-distribution detection<sup>[1]</sup>
  - In-Distribution (InD): data following the training distribution of neural networks
  - Out-of-Distribution (OoD): data NOT from the training distribution
  - A bi-classification task: scoring function  $S(\cdot)$ , threshold s
  - Evaluation metrics: FPR with a 95% TPR, AUROC

$$D(\boldsymbol{x}) = \begin{cases} \text{InD}, & S(\boldsymbol{x}) > s, \\ \text{OoD}, & S(\boldsymbol{x}) < s. \end{cases}$$

### Background

- PCA for Out-of-Distribution Detection
- PCA learns a subspace characterizing InD information from the training data (InD)

Projecting new data  $\hat{x}$  into the subspace and re-projecting back, we can obtain the **reconstruction error**  $e(\hat{x}) = ||U_q U_q^T (\hat{z} - \mu) - (\hat{z} - \mu)||_2$ 

- An ideal case: InD data with a small  $e(\hat{x})$ ; OoD data with a large  $e(\hat{x})$ .
- Existing works<sup>[6]</sup>:
  - Empirically verifying that PCA is insufficient in separating OoD and InD.
  - No further explorations on the reasons behind. A simple combination with other scores.

### **Motivation**

Considering that PCA is linear, we propose

- The **non-linearity** in InD and OoD data hinders PCA from learning a suitable subspace.
- Kernel PCA<sup>[7]</sup> is introduced to leverage the nonlinear kernel to learn a subspace where the disparity between InD and OoD gets pronounced.

## CIFAR10 iSUN D (CIFAR10)

(a) T-SNE of z and PCA reconstruction errors.

(b) T-SNE of  $\Phi(z)$  and KPCA reconstruction errors.

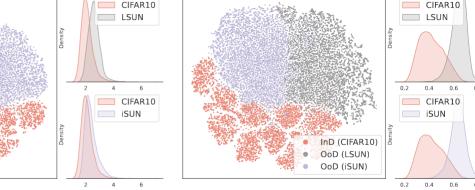

Challenges we face:

- How to find **appropriate kernels**?
- How to leverage KPCA in **large-scale data**? (Storage and computation of the kernel matrix)

### Solutions we propose:

- <u>A kernel perspective</u> on the KNN method<sup>[8]</sup>
- Explicit feature mappings to approximate kernels, avoiding computations on the kernel matrix

[7] Bernhard Schölkopf, Alexander Smola, and Klaus-Robert Müller. Kernel principal component analysis. In International conference on artificial neural networks, pages 583–588. Springer, 1997 [8] Yiyou Sun, et al. Out-of-distribution detection with deep nearest neighbors. In International Conference on Machine Learning, pages 20827–20840. PMLR, 2022.

### Non-linear kernel design

Cosine kernel

Methodology

Normalize the imbalanced feature norms

•  $k_{\cos}(z_1, z_2) = \frac{z_1^T z_2}{||z_1||_2 \cdot ||z_2||_2} = \phi_{\cos}^T(z_1)\phi_{\cos}(z_2)$ 

#### 4 6 8 10 12 Cosine-Gaussian kernel

- $l_2$  distance on  $l_2$ -normalized features benefits OoD detection<sup>[8]</sup>
- A Gaussian kernel preserves the l<sub>2</sub> distance  $k_{\text{gau}}(\mathbf{z_1}, \mathbf{z_2}) = e^{-\gamma ||\mathbf{z_1} - \mathbf{z_2}||_2^2}$

## **Explicit feature mappings of kernels**

**Cosine kernel** 

 $l_2$  normalization

- $\Phi(\cdot) \triangleq \phi_{cos}(\cdot)$
- Computation complexity O(1)
- **Cosine-Gaussian kernel** <u>*l*</u><sub>2</sub> normalization + *l*<sub>2</sub> distance
  - Random Fourier Features<sup>[9]</sup> to approximate  $k_{gau}$
  - $\Phi(\cdot) \triangleq \phi_{\text{RFF}}(\phi_{\cos}(\cdot))$
  - Computation complexity  $\mathcal{O}(M), N_{tr} \gg M$

 $\phi_{\mathrm{RFF}}(\mathbf{z}) \triangleq \sqrt{\frac{2}{M}} [\phi_1(\mathbf{z}), \dots, \phi_M(\mathbf{z})]$  $\phi_i(\mathbf{z}) = \cos(\mathbf{z}^T \boldsymbol{\omega}_i + u_i), j = 1, ..., M$

Random features for large-scale kernel machines. Advances in neural information processing systems, 20, 2007.

## **Kernel PCA for Out-of-Distribution Detection**

### **Experiments – OoD detection**

- Comparisons with the KNN method<sup>[8]</sup>
  - Better performance, cheaper complexity
- Comparisons with regularized PCA<sup>[6]</sup>
  - Better performance, indicating superior non-linearity

### Conclusion

- KPCA learns a subspace where the disparity between InD and OoD is pronounced.
- **Effective kernels** under the OoD detection task
  - Cosine kernel
  - Cosine-Gaussian kernel
- Resolving the challenge of KPCA in large-scale data
  - Explicit feature mappings
  - Significantly reduced time and memory complexity.  $(\mathcal{O}(N_{tr}) \rightarrow \mathcal{O}(M), N_{tr} \gg M)$
